Project scope and acceptance

SOAR — Student Organizations and Allied Resources

Fixed development fee: ₱3,000

Features in scope

Feature	Included scope
Layout and design	Redesign the existing login, registration, directory, organization profiles, announcement feed, trackers, settings and officer pages for phones and computers. Use readable colors, consistent headings, buttons and spacing, properly sized images and forms that fit the screen. Arrange wide tables for phone use without cutting off actions. Add small button and page transitions, plus clear loading, empty and error messages.
Accounts and settings	Keep student, organization-officer and basic outside-user accounts. Registration collects a name, email, password and relevant ID details. Users can sign in, sign out and recover a password through email. Settings allow name changes within the existing 30-day limit. Email changes require the current password and verification of the new address; the saved email changes after verification. Show the pages and controls appropriate to each account's role.
Organizations	Show a directory with each organization's name, logo, short description and profile link. Keep name search, with a clear message when no organizations match. Each profile shows its description, contact details, recruitment information, posts and available dates. Officers can update their own organization's name, logo, description, contact email, recruitment title, requirements and application link.
Announcements	Officers can publish text announcements with an optional image and delete their own posts. Show the newest posts first, with the organization's name, logo and posting date, both in the main feed and on its profile.

Feature	Included scope
	Users can like or unlike a post, open its comments and add a comment. Keep the counts and saved comments consistent across both pages. Check for empty posts or comments and show a clear message when saving fails.
Applications	Show the recruitment title, requirements, instructions and existing Google Form or other application link. Opening the link alone will not count as a completed submission. Students confirm that they submitted the external form before it is listed for checking. Officers check responses in the existing form or Google Sheet and update the stage: Pending, Under review, Accepted or Declined. Students see the organization, position and stage in a simple progress tracker. Prevent duplicate entries for the same application.
Calendar	Officers can add, edit and remove their organization's events and available interview or meeting dates, including a title, date, short details and time where needed. Show a simple dated event list on the organization's profile. Make event details and available meeting dates easy to tell apart. Keep changed or removed entries consistent with the saved records and check that required dates are valid.
Meeting requests	Keep the existing request flow: choose an organization's posted meeting or interview entry, enter a date and time, and send a request. Users see the organization, meeting title, requested date and time, and Pending, Approved or Declined status. Officers see their own organization's requests and approve or decline them. Check required details and prevent repeated identical requests. A pending request is not a confirmed booking.
Officer dashboard	Arrange the existing profile and recruitment settings, announcement controls, applicants, calendar entries and meeting requests into clearly labelled sections. Use readable status labels, clear save messages and confirmation before deleting a post or calendar entry. Officers manage only the organization linked to their account.
Image uploads	Keep uploads for organization logos and announcement images. Show a preview before saving, check the file type and size, and explain when an image cannot be accepted.

Feature	Included scope
	Keep images in the project's file storage so they still appear after refresh and sign-in. Display them without stretching or overflowing the page. Only the responsible officer can replace their organization's logo or upload images to its posts.
Annual subscription	₱2 per account for one year from a confirmed GCash payment through one payment provider. New users pay before creating an account; existing users need active paid access. Link each confirmed payment to the correct registration or renewal. The site checks payment automatically and shows the payment status and access end date. Pending, failed or cancelled payments do not unlock registration or the main pages. At expiry, users pay again themselves; there is no automatic yearly charge. Keep their account and saved records for renewal. Entry, sign-in, payment, renewal and password recovery pages stay available while the main pages are locked. Users cannot edit their paid status or access end date.
Saved data and handover	Use the existing Firebase project for accounts and saved records, with file storage for images. Fix loading, saving and repeated-click issues so information stays correct after refresh, sign-out and use on another device. Keep private application, meeting and payment records visible only to the right accounts, and limit organization changes to its officers. Deliver the hosted website, complete updated source files and short instructions for setup, account roles, payments and the main tasks.

Completion and acceptance

- The included pages are readable on phones and computers. Navigation, forms, images and tables fit the screen, and loading, empty and error messages are clear.
- Registration, sign-in, sign-out and email password recovery work. Name changes follow the stated limit, and email changes take effect after verification.
- Name search finds the right organizations. Profile changes, posts, images, likes and comments appear correctly in the directory, feed and organization pages.
- Application links open correctly. Only confirmed submissions enter the checking flow; officers' saved stage changes appear in the student's progress tracker without duplicate entries.
- Officers can add, change and remove calendar entries, and permitted images save and display correctly after refresh and sign-in.

- Meeting requests save with the correct organization, date and time. Officers can approve or decline them, users can see the decision, and repeated requests are handled clearly.
- A real successful ₱2 payment unlocks account creation and one year of access. Pending, failed or cancelled payments and expired access stay restricted; renewal restores access without losing saved records.
- Users see only their private application, meeting and payment records. Officers manage only their organization. Users cannot change their paid status or access end date.
- The hosted link, complete updated source files and short use/setup instructions are handed over after the final review.

Scope limits

Outside this scope: Monthly calendar views, warnings about overlapping meetings, category filters, dashboard counters, elaborate animations, financial or transparency reports, dedicated sponsor tools, RSVP or attendance tracking, forms built inside the site, automatic reading of Google Form/Sheet responses, post/application/meeting alerts by email, text or push notification, a native phone app and automatic yearly charges.

Files and account access

- **Complete project files:** all source code, images/assets, editable designs, and setup/deployment files. Send the full project ZIP or repository access.
- **Access to every account used for the project:** hosting, database, file storage, domain and code repository, including the existing Firebase project.
- Firebase access must cover Authentication, database/storage, security rules and hosting settings. Include any server/function code and Firebase configuration files.
- Organization content, images and application links; an activated payment-provider account that supports the ₱2 GCash checkout, and the Firebase billing setup required for live payment confirmation and image uploads.

Invite the developer through each service's access settings. Share any required secrets privately. The client group finds users and paying customers.
